LIGHTING

DESIGN

GUIDE

2024

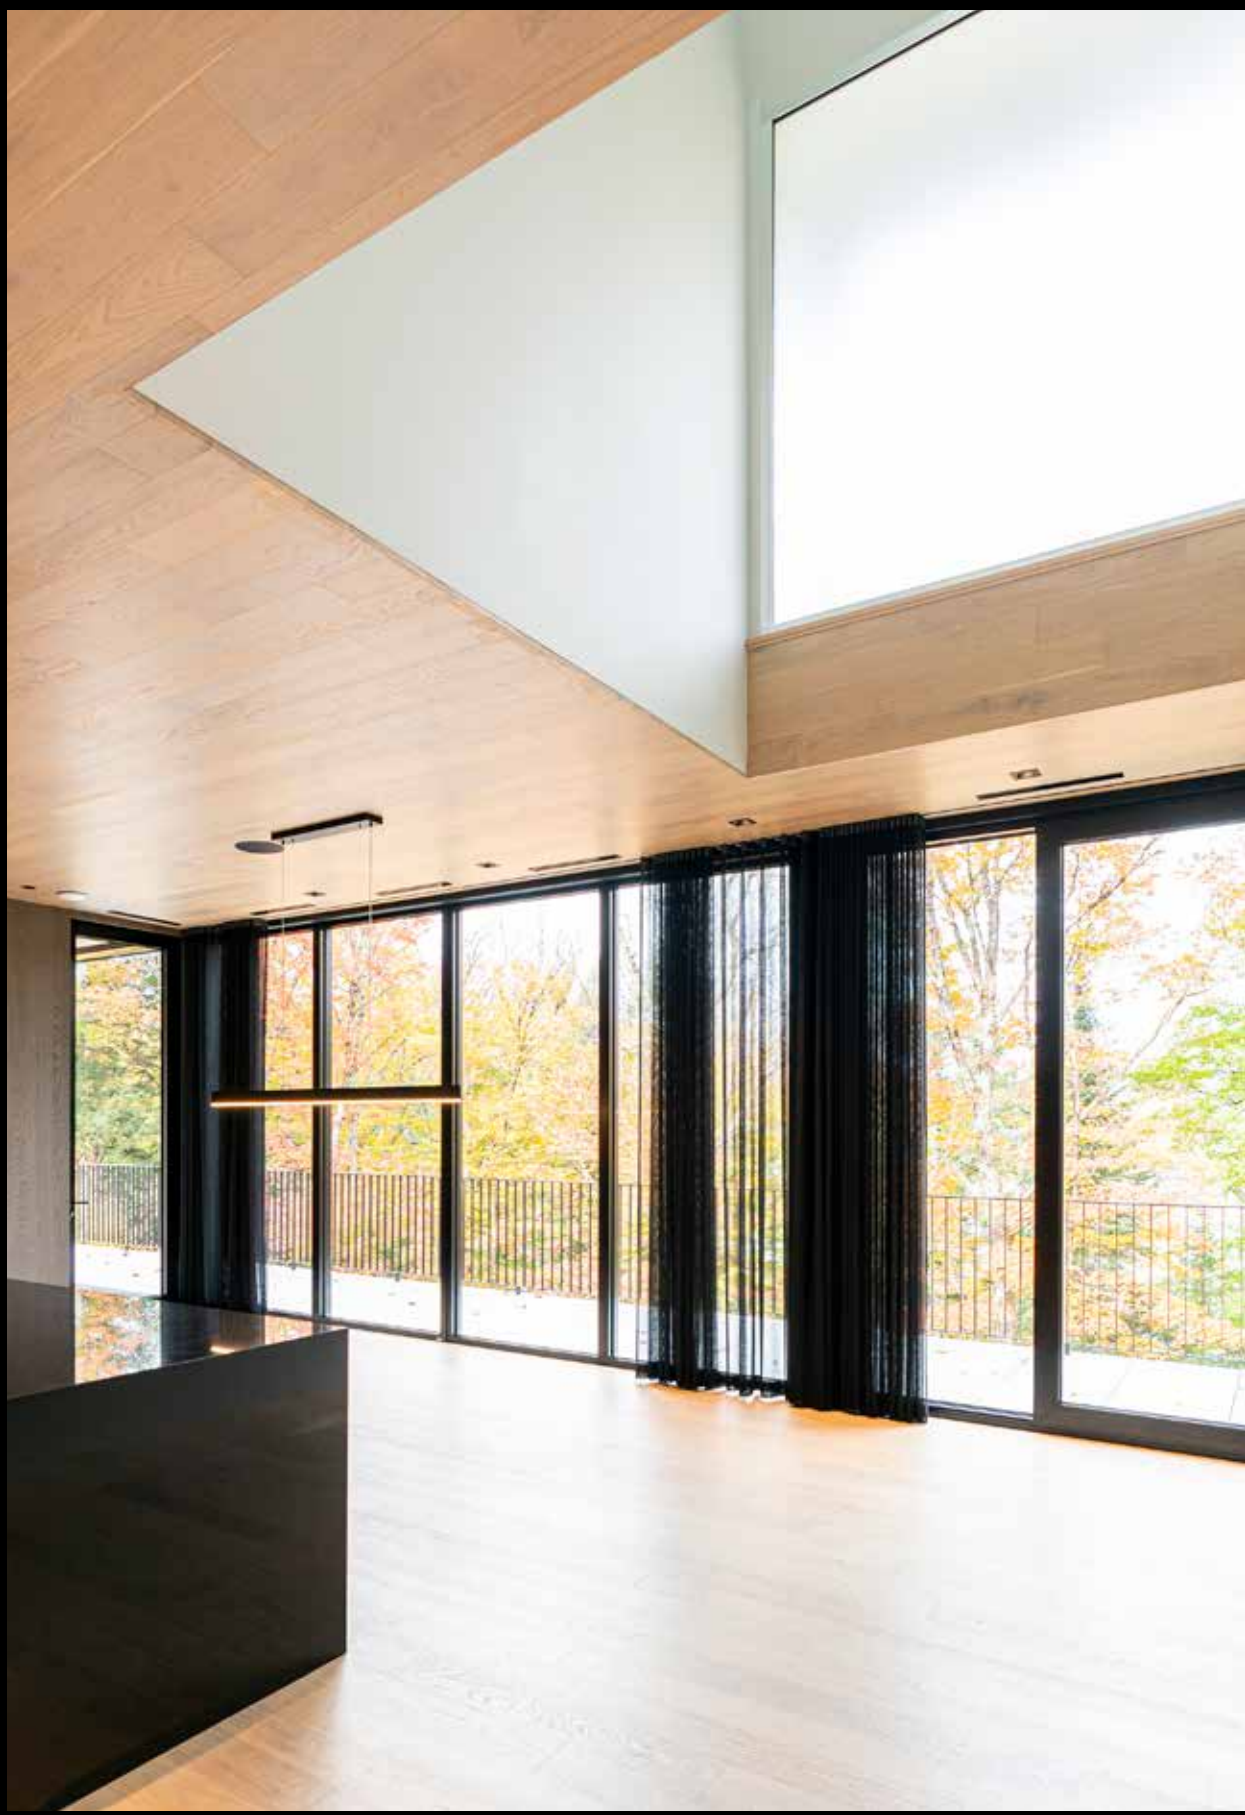
15 YEARS

Our mission

Our mission is to offer the highest level of service and quality through an innovative, functional and complete product line.

DALS Lighting is a manufacturer of designer lighting products focusing on smart, innovative and emerging technologies. Our lighting systems are displayed and stocked at several lighting showrooms and retailers, electrical distributors and e-commerce platforms.

Our products are also sold on projects across North America through an extensive network of agents who work with architects, engineers, contractors and distributors.
We strive for excellent service, superior lead times, environmental innovation and product quality.



DALS headquarters

Our milestones

2008
DALS Lighting Inc. was founded and quickly grew to become a leader in accent lighting by launching an innovative LED product line.

2009 - 2014
DALS continues its steady growth by shifting all of its product lines to LED light sources while continuing to focus on best-in-class service.

2015
Following its rapid growth with LED products across North America, DALS launched its LED Design Guide, which focused exclusively on LED technology and included several new innovative items. DALS also opened its LED lighting showroom at the Dallas Market Center in Dallas, Texas.

2016
DALS moved into its new headquarters in Blainville, Quebec, Canada. DALS also expanded its U.S. operations in Coral Springs, Florida.

2017-2019
DALS launched its smart home ecosystem, which includes a range of connected products that are easy to use with the DALS mobile app. The launch of this category has generated a lot of excitement in the industry and we've dedicated a team to accelerate the continued development and optimization in this division.

2020-2022
In 2020, DALS opened its new atrium showroom at the Dallas Market Center and accelerated its product launch cadence. We launched the DALS Connect and DALS Connect PRO smart platforms as well as new product categories such as landscape lighting, which resulted in significant growth.

2023
In 2023, DALS achieved significant expansion by doubling the size of its headquarters and main warehouse, reinforcing its commitment to operational excellence. Simultaneously, the company forged a strategic financial partnership, positioning itself for accelerated growth in the upcoming phases. This expansion and financial collaboration underscore DALS's dedication to enhancing its infrastructure and preparing for a dynamic future.

2024
In 2024, DALS proudly unveils its largest product launch, emphasizing enhanced features and elevated product content. We are expanding into decorative categories and offering additional options for the commercial market, reflecting our dedication to meeting diverse customer needs and continuously improving our offerings.

Notes on Symbols

NEW

New product

This symbol depicts a new product launching this year. Look for specifications for these products in this catalog.

UPGRADE

Product upgrade

When you see this symbol, it indicates that an existing product has undergone extensive enhancements.

Low-glare

The recessed positioning of the LED module in this series of downlights significantly reduces glare.

Change colors

RGB+CCT color-changing light - choose your favorite color to create different atmospheres or use it for general illumination with a range from warm to cool white.

Air tight

Airtight fixtures help prevent air conditioning or heating from leaking out of the home through holes in the ceiling.

JA8

JA8/Title 24

This certification ensures that the lighting control system is designed, installed, and programmed correctly to comply with the JA8/Title 24 Lighting building code of California.

Multi-voltage

This symbol indicates that a product family offers multi-voltage drivers (120/277/347) that can be dimmed using 0-10V dimming systems.

Fire rated

Fire-rated recessed lights feature fire-resistant housings and seals to prevent fire from spreading through ceiling or wall openings, ensuring safety and compliance with building codes.

CCT switch

These types of lights provide you with the ability to change the color temperature. Within one fixture, you have a range of color temperatures that go from warm white to cool white.

IC

IC rated

"IC" stands for Insulation Contact. The IC rating is essentially a measure used to determine whether a recessed downlight is suitable to come into contact with your home's insulation or not.

Wi Fi

Smart home

This symbol indicates that the light fixture can be controlled from the DALS Connect app. You can remotely adjust the lighting in your home from anywhere, enjoy greater control over lighting effects such as dimming and color, and establish automated lighting schedules around your lifestyle.

Dry location

Dry-rated lights don't protect against condensation and should not come into contact with water. However, these fixtures can withstand brief exposure to moisture with proper ventilation.

Damp rated

Damp-rated lights are used in places that have some contact with moisture but not in areas with constant or direct exposure to water. For example, you can use damp-location rated fixtures to illuminate the area directly outside your shower.

Wet rated

Wet-rated lighting fixtures are used in places with direct exposure to water but cannot be submerged. Fixtures rated for wet locations use waterproof seals to protect their internal components from moisture.

ADA

ADA compliant

The ADA sets regulations that define limits and standards contractors must meet and comply with when installing light fixtures in public buildings. To be considered ADA compliant, the fixture cannot extend more than 4 inches into the hallway, walkway, or corridor to protect people with disabilities from bumping into them and harming themselves.

Bluetooth®

Bluetooth compatible

This smart light, while Bluetooth-compatible, can be seamlessly integrated into your DALS Connect ecosystem.

Motion sensor

This symbol indicates that a light fixture incorporates responsive technology, detecting movement in its proximity and triggering the illumination for enhanced efficiency and convenience.

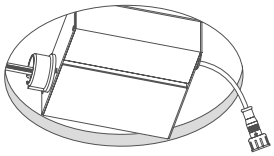
Proper Sizing, Spacing and Downlighting Techniques

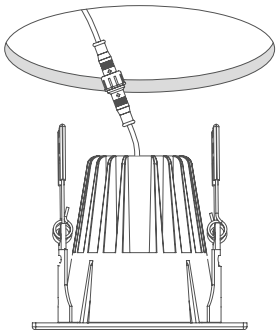
The components

Our recessed kits include two main components: the driver and the fixture.

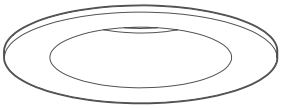
A



B



C



The driver (A)

is what is recessed into the ceiling and consists of the electrical parts that bring power to the light.

The fixture (B & C)

is what's visible to people in the room and gives the light its aesthetic.

GOOD TO KNOW!

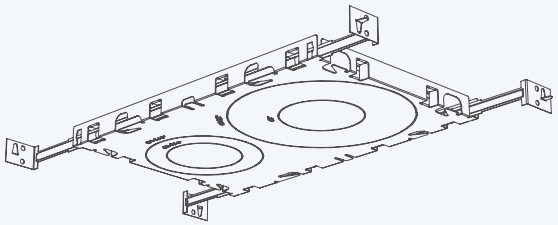
Fixtures and drivers are sized to correlate with one another and are sold together with all of our recessed lights.

Panels. Spotlights. Downlights. Whatever you call recessed lights, they're some of the most versatile lighting options out there. The most common use of recessed lighting, and what we'll focus on here, is recessed downlighting from the ceiling.

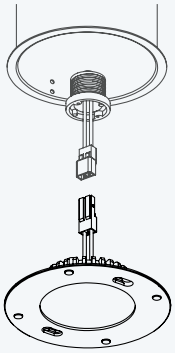
Installation type

What fixture you choose starts with knowing whether it will be used in a new construction, a remodel or as a retrofit.

D



E



New construction

Locations with visible ceiling joists and without drywall. Lights can be used with our rough-in plates **(D)** to help in the installation process.

Remodels

When the joists are not exposed or if you want to upgrade your current system to LED.

Retrofit

When an existing bulb is removed from the original housing, and replaced with an LED trim **(E)**.

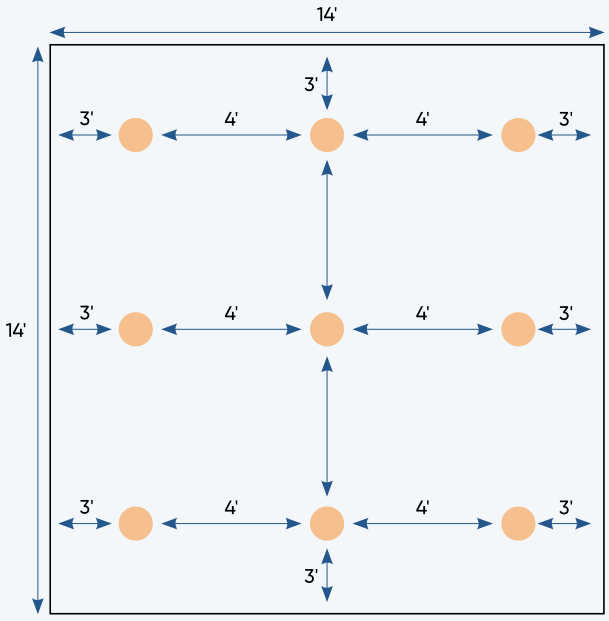
GOOD TO KNOW!

Most of Dals' recessed fixtures are designed for new construction and remodels. These fixtures are installed through a small opening in the ceiling and held in place with clips.

GOOD TO KNOW!

A rough-in plate is designed for new construction or renovations where the ceiling framing is exposed. It allows for proper placement of your recessed light and is made from sturdy galvanized steel.

How many downlights do I need?



A simple method for estimating the number of downlights required is as follows:

Recessed downlights are generally positioned 2 to 3 feet away from walls with a space of 3 to 4 feet between each light.
Dividing the ceiling height by two is a way of gauging how much space to leave between each downlight.

Thus, if your ceiling is 8 foot high, place your lights 4 feet apart.

GOOD TO KNOW!

In Canada, 4" recessed lights are the most popular, in the U.S., 6" are most commonly used.

APERTURE / P. 40

Horus

A versatile lighting solution with a flexible design for precise illumination, its gimbal mechanism allows users to easily adjust the light angle, making it ideal for residential or commercial settings. The compact 3-inch size is suitable for tight spaces, and the spotlight's focused beam makes it perfect for accent lighting or task-oriented applications.

Specifications

Every fixture includes a junction box with an integrated driver

Over 50,000 hours service life

Switch-selectable CCT: 2700 K/ 3000 K/3500 K/4000 K/5000 K (GBRXX-CC models only)

Dim-to-warm technology, dims from 3000 K to 2200 K to mimic incandescent light (GBRXX-DW models only)

40° beam angle

30° tilting, 360° rotation

Cast aluminum construction

Suitable for wet locations

Refer to website for dimmer compatibility

IC certification (suitable for direct contact with insulation)

Air-tight certified as per ASTM E283-04

5-year warranty

Multi-voltage

This product family offers multi-voltage drivers (120/277/347) that are dimmable using 0-10V dimming systems. Please note that longer lead times may apply for this option. Kindly reach out to your DALS representative for additional information and to confirm availability.

Note

Other color temperatures, finishes, and voltage options are available but may require minimum order quantities (MOQs) and longer lead times. Please contact your DALS representative for more information.

COLOR TEMPERATURE

When choosing a recessed fixture, eliminating glare is a priority. The unique positioning of the LED module in this series of downlights will meet that important need.

Model	Size	Watts	Delivered lumens	CRI	Color °T	Standard voltage	Multi-voltage
RGR2SQ-CC	2"	8 W	600 lm	90	2700, 3000, 3500, 4000, 5000 K	120 V, Triac dimming	MV: 120 / 277 / 347V, 0-10V dimming
RGR4SQ-CC	4"	14 W	1100 lm				
RGR6SQ-CC	6"	20 W	1600 lm				

Specifications

Every fixture includes a junction box with integrated dimmable driver

Can be daisy chained (4" and 6" models only)

Superior LED performance and lifespan

Regressed light source

Minimal heat emission

Aluminum construction

Switch-selectable CCT: 2700K/ 3000 K/3500 K/4000 K/5000 K

IC certification (suitable for direct contact with insulation)

Air-tight certified as per ASTM E283-04

40° beam angle

Suitable for wet locations

Refer to website for dimmer compatibility

JA8 Certified

Ideal operating temperature: -20° to 40° C

5-year warranty

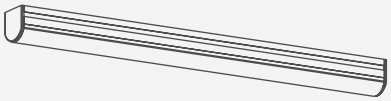
Proper Sizing, Spacing and Lighting Techniques

As its name suggests, under cabinet lighting refers to lights that are installed under a cabinet, resulting in illumination of the area immediately below a section of cabinets. It is most commonly used in kitchen areas, where additional lighting is useful for food preparation.

Types of under cabinet lighting

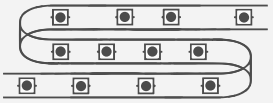
Puck lights

Pucks are the most versatile products as they can be installed in any application. Most of our pucks can be either surface-mounted or recessed into cabinetry, ensuring a flush surface appearance. Our pucks are designed to provide smooth and uniform light output.



Linears

Linears are ideal for efficient and uniform solutions. All our linears are designed for surface mounting, and many of them can pivot to focus on features such as the backsplash. Most linears come in various sizes, allowing them to be combined to cover the length of most surfaces.



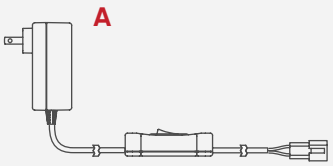
Tape lights

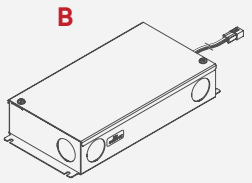
Tape lights are flexible rolls of LEDs with adhesive backs, suitable for virtually any application, extending beyond under-cabinet lighting. Tape lights have a super low profile and are easy to install.

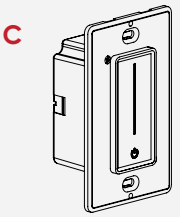
How many do I need?

If you are installing pucks, we recommend spacing them approximately 24 inches apart. For linears, you can either seamlessly install them from end to end or leave a gap equivalent to the size of the product.

Power source







Low-voltage (12V)

Low-voltage systems consist of two components: the light fixture and the driver. Typically, a single driver is employed to power multiple products. The advantages of low-voltage systems include the ability to create sleeker light fixtures with fewer required components. Additionally, the wiring from the driver to the fixtures is low-voltage, resulting in thinner and less restrictive wiring.

Direct wire (120V)

120V direct means that no other components are required to power the product. Either the LED's are 120V direct or a driver is integrated in each product. The advantage of a 120V product is the ease of installation.

Dimmer/driver switch (12V)

Replace your 12V driver with an integrated driver/dimmer to control the brightness of your low-voltage lights. Simply connect this unit to your 120V input current to regulate your low-voltage lighting.

Choosing the right driver

We offer a wide range of plug-in **(A)**, direct wire **(B)**, and dimmer/driver switches **(C)**. To select the correct driver, simply add up the wattage from all your lights and choose a driver with a higher wattage that suits your specific needs.

Connections

Direct wire

Direct wire systems are typically installed by electrical contractors, it means that the power feed is connected directly inside the product or driver, without any plugs therefore no exposed wires. Direct wire installations must be enclosed in a connection box with a minimal volume for a safe connection. All of our direct wire products have the connection box built in to them with convenient knock-outs to discretely pass the wiring.

Plug-in

Plug-in options are really easy to install as they plug directly into an electrical outlet.

Dimmer/driver switch

Dimmer/driver switch systems, two-in-one integrated units often installed by qualified electricians, seamlessly replace your standard wall switch and transformer simultaneously. This involves connecting the power feed directly inside the switch, eliminating the need for plugs and exposed wires.

GOOD TO KNOW!

For optimal dimming try to use up at least 50% of the driver's capacity. For example, if all products come up to 10 watts, you would be much better off with a 12W driver than a 24W driver.

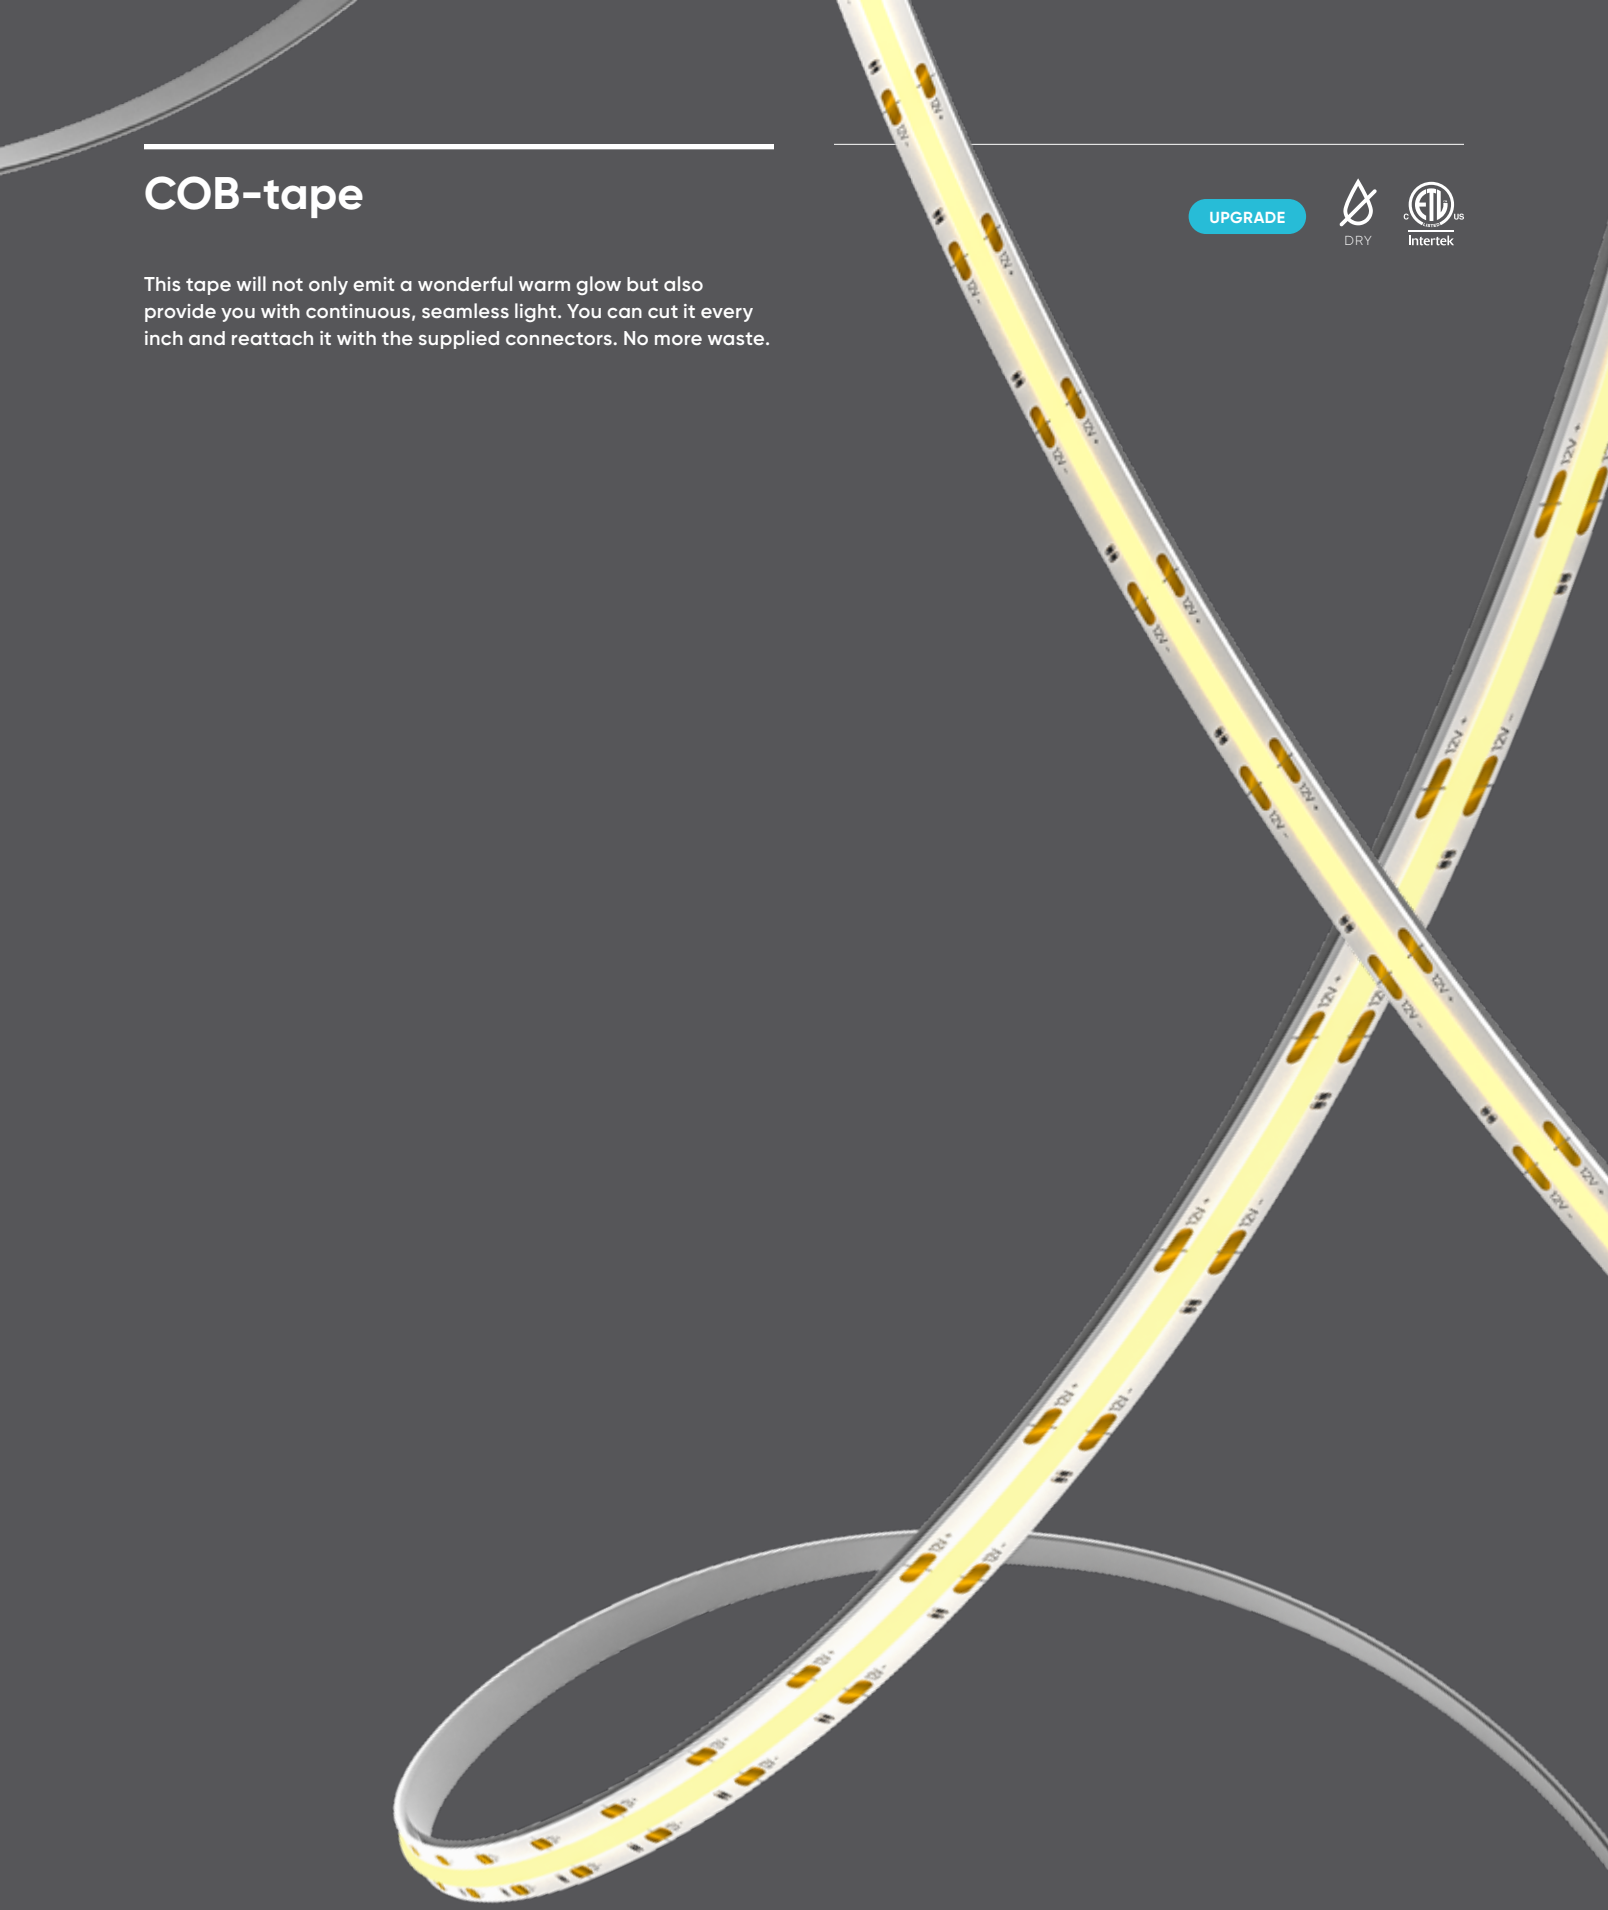
COB-tape

UPGRADE

DRY

Intertek

This tape will not only emit a wonderful warm glow but also provide you with continuous, seamless light. You can cut it every inch and reattach it with the supplied connectors. No more waste.



Model	Size	Watts	Delivered lumens	CRI	Color °T	Voltage

Specifications

12V DC LED plug-in driver included (1m=12w / 3m=24w / 5m=48w)
Excellent color rendering
Seamless light emission (360 LEDs/meter)
Warm white light output
Superior LED performance and lifespan
Over 50,000 hours of service life
Can be cut at every cut mark (every 2 cm)
Maximum run length of 5m (196") in a series
Dimmable with DALS dimming power supply and most low-voltage electronic dimmers
Refer to website for dimmer compatibility
5-year warranty

Thanks to its ¼" profile, our 12V ultra-slim LED pucks can be integrated onto any surface. Available as a single unit or as a kit of 3. The choice is yours!

Model	Size	Watts	Delivered lumens	CRI	Color °T	Voltage
4006	Ø3.875"	3.6 W	250 lm	90	3000 K	12 V

Specifications

12V DC LED driver required (4006/4006SQ)
Over 50,000 hours of service life
12" input lead with quick connector
24" interconnection harness included
Warm white light output
Superior LED performance and lifespan
Smooth 360° wide spread
Minimal heat emission
Heat sink and thermal protection
JA8 Certified
Refer to website for dimmer compatibility
5-year warranty

Note

Plug-in or hard-wired power supply required for installation when purchasing the single unit (4006). Sold separately.

Other color temperatures, finishes, and voltage options are available but may require minimum order quantities (MOQs) and longer lead times. Please contact your DALS representative for more information.

DRY

Intertek

Replace your 12V driver with this 12V dimmer switch with an integrated driver to control the brightness of your low voltage lights. Connect this unit to your 120V input current, and all your lights will dim to a nice, soft glow.

Model	Size	Dimmer	Switch	Minimum load	Maximum load	Input voltage	Output voltage
DD1260	4-1/4"	√	√	5 W	60 W	120 VAC	12 VDC

Specifications

LED driver and dimmer in one unit
Indoor use only
Input: 120 VAC ~ 1.0 A, 60 Hz
Dimmimg range: 100% - 10%
Dimming type: TRIAC edge cut
Fits in a standard electrical box
Single pole
Works with all dimmable 12V lights
5-year warranty

Finish

◯ **WH** White

Note

Does not work with Dals smart lights. Requires a neutral wire. Works in a single-pole setup only.

How to create

A low-voltage landscape lighting plan

The three main components

A. Low-voltage transformer

- The power supply for your system
- Usually mounted near or on the house that is plugged into a regular outdoor-rated GFCI electrical outlet.

** Avoid mounting the transformer in shady areas, this could interfere with the "dusk-to-dawn" photoelectric cell.*

** Should be installed at least 36" (3 feet) off the ground.*

B. Landscape lighting fixtures

- Integrated LED spot lights, path lights, and bollards.
- Powered by the transformer

**When you choose lights, add up the total wattage they consume. You'll need this number for choosing other parts of your landscape lighting system.*

C. Landscape lighting wire

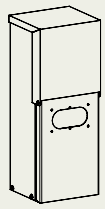
- The wire connecting the transformer to the light fixtures.
- Rated according to the size of its conductor (gauge)

** A 12-gauge wire is larger and can handle more wattage than a 14-gauge wire.*

** Selecting the right wire size is important and will prevent any issues down the road.*

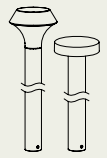
Transformers

60W



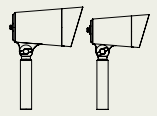
300W

Path lights



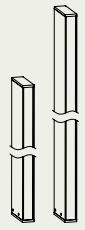
These fixtures aren't limited to paths. When mounted in gardens, they provide a gentle glow that lights a small surrounding area of plants, rock, or mulch.

Spot lights



Use spotlights to make trees, plants, shrubbery, or a home's architectural features stand out.

Bollards



Use these lights to enhance the look of your yard while making walkways obvious at night.

Landscape wire

Versatile 12, 14, and 16 gauge low-voltage wire for spot lights, path lights, and bollards.

GOOD TO KNOW!

Mix it up! Different types of fixtures can be connected together.

The four steps for an LED landscape installation

1. Map out a plan

- Start your layout by creating a sketch of your property.
- Be accurate with dimensions to help estimate distances for wire runs.
- Try sketching and measuring as you walk around the property marking where each fixture will be placed.

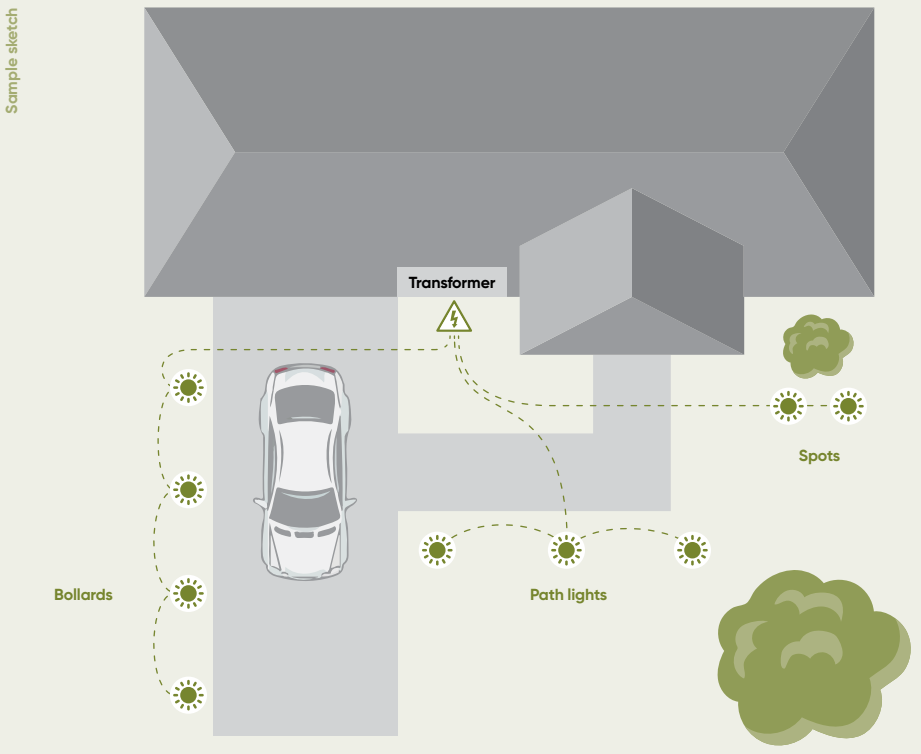
2. Set fixture locations

- Mark their locations with small flags on your property and indicate their placement on your sketch.
- Measure distances between fixtures and write them down on your layout.

3. Choose a power supply

- To figure out which power supply is best, consider two things: the total wattage of the lights that you're purchasing and if you anticipate adding lights in the future.
- When you add up the wattage of all lights, you'll have a good idea of how powerful your transformer needs to be. However, the total wattage of your lights should be 20 percent less than the transformer's rated wattage.
- Once you've selected the right transformer, the best placement is usually next to the house in a hidden location, as close as possible to the fixtures.

Sample sketch



GOOD TO KNOW!

Be sure to call your utility company before you dig anywhere on your property. Most companies provide a free service that marks the locations of all underground utilities.

4. Wiring

Now you need to provide power to the fixtures. The length of runs helps determine what gauge of wire to buy. As a general rule, try to keep the runs under 50 feet with a maximum of 8 fixtures per run. Lower loads per run means lower voltage drop.

What is Voltage Drop?

Voltage decreases as it moves through a run of wire and a series of lights. This means that, because each light is receiving a little less than the one before it, lights can appear dimmer toward the end of a series. A small loss is OK, but anything more than a 1.5-volt drop should be corrected.

Checklist

Before you get ready to install your lights, make sure you have all the tools and accessories required. Below is a basic list of what you might need.

- Landscape lights
- Transformer
- Wire
- Waterproof junction box to protect connections
- Flat-blade shovel or edger
- Wire cutters
- Wire strippers
- Voltage meter
- Tape measure
- Hardware to install transformer on house or post

Check your LED fixtures' voltage requirements. This plan is for use as a guide only to help you begin your lighting project. We strongly recommend checking the actual voltage at each fixture with a volt-meter before burying and finalizing your project.

Minimize voltage drop, and wasting wire, by using one of the wiring methods below:

Daisy Chain

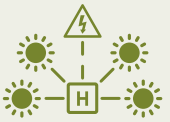
Connects all fixtures in a linear fashion, where the first fixture connects to the transformer.

Tip:
Use the Daisy Chain method when fixtures are not grouped and can be easily connected in a chain.

T-Method

Similar to the Daisy Chain method, except the transformer connects to the middle of the chain.

Tip:
Use the T-Method when you built a Daisy Chain in the field and want to connect it to the transformer from the middle of the chain - at whatever point saves you the most wire.



Hub Method

All fixtures run through a hub junction and are connected to a single line from the transformer, ensuring each fixture receives an equal share of voltage.

Tip:
Use the Hub Method when fixtures are grouped in a small area such as in a garden bed.

How to create

A Dals Connect PRO Smart Landscape Plan

The main components

A. Low-voltage transformer

- The power supply for your system
- Usually mounted near or on the house that is plugged into a regular outdoor-rated GFCI electrical outlet.

** Avoid mounting the transformer in an area with poor Wi-Fi reception.*

** Should be installed at least 36" (3 feet) off the ground.*

B. Landscape lighting fixtures

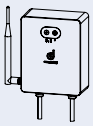
- Dals Connect PRO integrated LED spot lights, path lights, flood light, step light, stick light or ground light.
- Powered by the transformer

** When you choose lights, add up the total wattage they consume. You'll need this number for choosing the right transformer for your system.*

All Dals Connect PRO Landscape products come with a 6-foot extension wire and a T-connector for easy plug-and-play to facilitate installation.

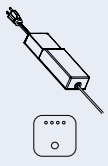
GOOD TO KNOW!

Mix it up! Different types of Dals Connect PRO fixtures can be paired together with your smart landscape



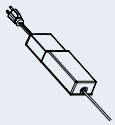
Transformers

These 24V transformers come in three power capacities, 60W, 200W and 300W. An integrated PRO hub is also included.



Plug-in Transformer & Dals Connect PRO Hub

Use the 36W DC adapter paired with a PRO Hub for smaller landscape projects

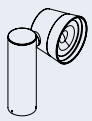


Plug-in Transformer

Use the 36W DC adapter paired without a hub for smaller landscape projects with local controls.

Path lights

These fixtures aren't limited to paths. When mounted in gardens, they provide a gentle glow that lights a small surrounding area of plants, rock, or mulch.



Spot lights

Use spotlights to make trees, plants, shrubbery, or a home's architectural features stand out.

Stick lights

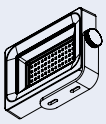
Use these lights to enhance the look of your yard while making walkways obvious at night.

Step Light

These fixtures can be surface mounted to almost anything to provide a soft glow to anything under it.

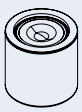
Rock Light

Bring magic to your landscape with these glowing rocks.



Flood Light

Use these lights to create wall washes or illuminate big portions of your yard



Ground Light

Use ground lights to illuminate trees and plants from below or decorate the floor of your deck.

The science behind your SMART landscape

1. Map out a plan

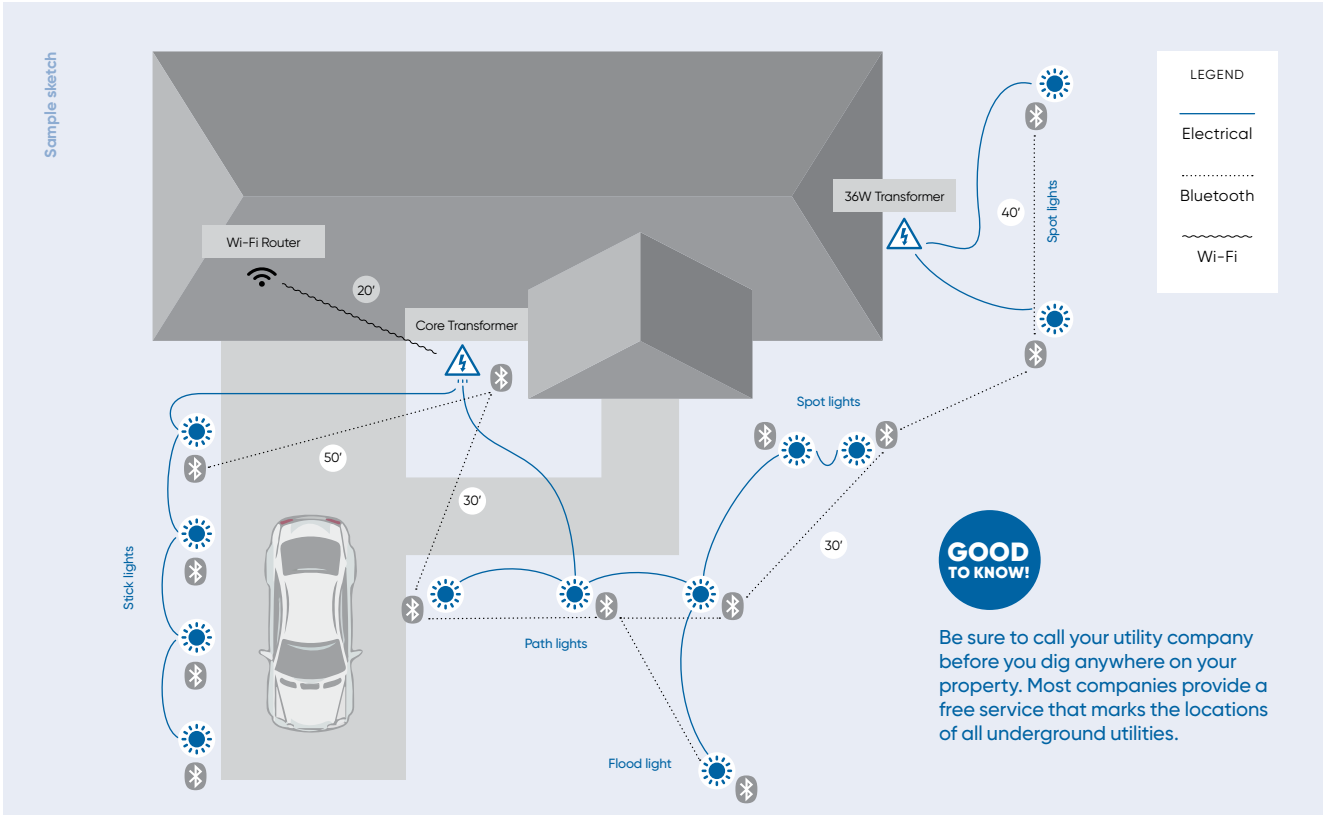
- Start your layout by creating a sketch of your property.
- Be accurate with dimensions to help estimate distances for wire runs.
- Try sketching and measuring as you walk around the property marking where each fixture will be placed.
- You can also mark the spots on your land where the Wi-Fi signal drops on your phone, this will help determine the preferred spot for your transformer placement.

2. Set fixture locations

- Mark their locations with small flags on your property and indicate their placement on your sketch.
- Measure distances between fixtures and write them down on your layout.
- Note how far away your Wi-Fi signal can reach.
- Check that all smart landscape products are within 30-50 feet of each other for maximum connectivity.
- We recommend pairing your smart landscape lights closer to the house first, and then move them to their desired location. An Internet connection is required for the first pairing.

3. Choose a power supply

- To figure out which power supply is best, consider two things: the total wattage of the lights that you're purchasing and if you anticipate adding lights in the future.
- When you add up the wattage of all lights, you'll have a good idea of how powerful your transformer needs to be. The total wattage cannot exceed the capacity of the transformer.
- Once you've selected the right transformer, the best placement is usually next to the house in a hidden location, as close as possible to the first fixture and to your Wi-Fi.



4. Wiring

To connect Dals Connect PRO smart landscape products, all you need is the included power extensions and T-connectors. Every connector has only 1 way to be plugged in, so making a mistake should be easy to avoid.

What is Voltage Drop?

Voltage decreases as it moves through a run of wire and a series of lights. This means that, because each light is receiving a little less than the one before it, lights can appear dimmer toward the end of a series. A small loss is OK, but anything more than a 2.5-volt drop should be corrected.

Checklist

Before you get ready to install your lights, make sure you have all the tools and accessories required. Below is a basic list of what you might need.

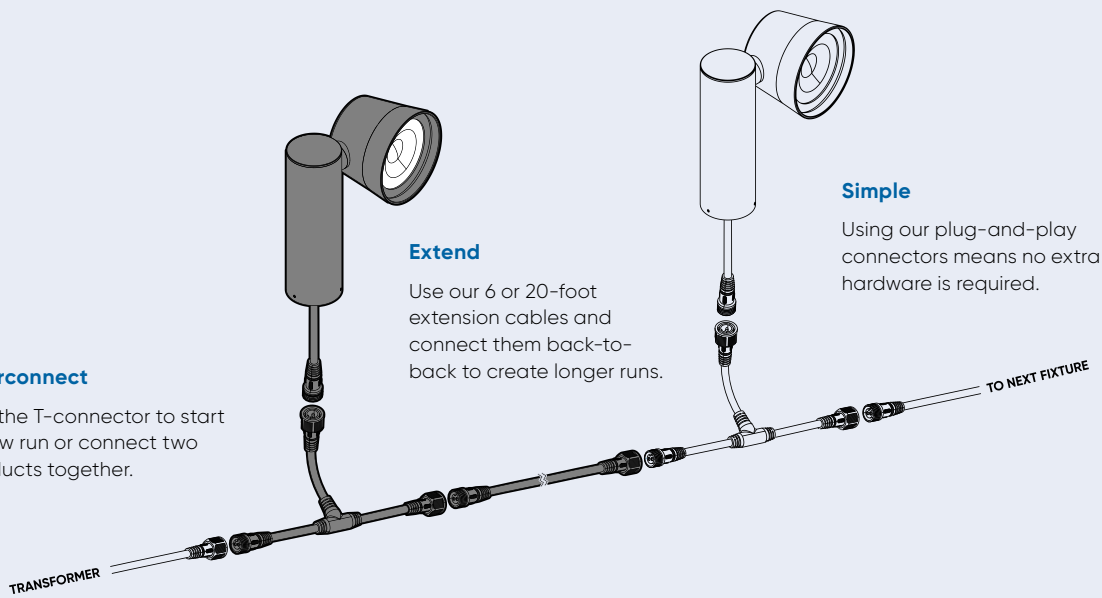
- Landscape lights
- Transformer
- Wire
- Tape measure
- Hardware to install transformer on house or post
- Your Wi-Fi password

Check your LED fixtures' wattage requirements. This plan is for use as a guide only to help you begin your lighting project. We strongly recommend planning your total load first and make sure you don't go over 100% load.

Easily wire your smart landscape with our plug & play wiring system.

GOOD TO KNOW!

Each fixture includes a 6 in. input lead, a T-connector, and a 6-foot extension cord. Everything you need to install fixtures 6 feet apart.



Interconnect

Use the T-connector to start a new run or connect two products together.

Extend

Use our 6 or 20-foot extension cables and connect them back-to-back to create longer runs.

Simple

Using our plug-and-play connectors means no extra hardware is required.

dals CONNECT

One app – one smart ecosystem with technology options

DALS launched its first smart home products in 2017 and has sold over 350,000 devices as of December 2023, showcasing our developed application expertise.

In 2019, the introduction of our DALS Connect platform quickly established its leadership with its Wi-Fi direct product ecosystem.

In 2022, DALS expanded its offerings with the launch of the DALS Connect PRO product assortment. This line utilizes Bluetooth mesh technology, enabling a higher number of devices on a network and introducing several other advanced features.

Both DALS Connect and DALS Connect PRO products seamlessly work together and can easily coexist on the same application.

Additionally, we are excited to announce the launch of many more smart home products this year, including a variety of new landscape products.

There are many benefits to smart lighting

Experience

White color temperature and a wide array of fun colors are easily changeable, allowing you a multitude of lighting options for comfort.

Save

Save on energy and increase your home's security by using schedules or remotely turning on/off the lights when no one is home.

Control

Easily control your lighting with smart switches, your phone, or a voice assistant for even more convenience.

Create

With the Dals Connect app, you can program your own lighting scenes for specific conditions and tasks, such as watching movies, daytime or nighttime reading, parties, and much more. Within a scene, you can change the brightness, color temperature, and even use different hues.

What are the main differences between DALS Connect and DALS Connect PRO?

dals CONNECT

Quick start – direct features

DALS Connect products use Wi-Fi wireless technology which is used widely to connect computers, tablets, smartphones, smart devices, and others to the internet. Wi-Fi is shared through a router to all Wi-Fi enabled devices. This technology allows for a lot of range and a lot of devices, although there are some limitations as well. Wi-Fi has a relatively high absorption rate and works best for line-of-sight uses. A residential wireless access point usually has a range of about 30 feet and a maximum of 20 devices, depending on the type of wireless access point.

dals CONNECT PRO

Higher number of devices – independent network

DALS Connect PRO uses Bluetooth-mesh technology. It works on the principle that each Bluetooth device on the mesh network can relay commands to another device, through the connection from the previous device. Bluetooth-mesh networking is a standard based on Bluetooth Low Energy that allows for many-to-many communication over Bluetooth radio. You can use your smart phone or tablet to control large groups of products even without an internet connection.

Dals Connect Pro hub

You can also add the Dals Connect Pro hub, to connect up to 128 DALS Connect PRO products to the cloud as a single internet connection (as opposed to DALS Connect products where each product has its individual connection). You can also use multiple hubs for projects with more than 128 devices, with each hub acting as an internet connection as well. Cloud connection allows you to use your products with voice command platforms (such as Google Home and Amazon Alexa) as well as allowing for remote control.

GOOD TO KNOW!

Not all Wi-Fi routers are created equal. A 30$ router will not perform the same or support the same number of devices as a 350$ router. The number of antennas will greatly increase your Wi-Fi range.

Most smart devices only operate on the 2.4 GHz spectrum, whereas most routers nowadays share the same band for 5 GHz and 2.4 GHz. If you experience issues with disconnecting devices or trouble adding new devices, try separating your 5 GHz and 2.4 GHz band on your router. Your internet service provider can help you set this up.

Which one is best for me?

Thanks to the Dals Connect Application, you don't have to use multiple apps to control all of your smart devices, even if you decide to mix and match communication technologies.

The Dals Connect App can support Bluetooth-mesh devices mixed with Wi-Fi devices, and you can add cloud connectivity to your Bluetooth-mesh devices using the Dals Connect Pro hub. All of these will work together, but which one is right for you?
Let's find out.

	DALS Connect	DALS Connect PRO	DALS Connect PRO + Hub
Uses the DALS Connect App	•	•	•
Can be controlled from multiple devices at once	•		•
Range of operation from the controller (Wi-Fi router or another Bluetooth-mesh device)	30 FT	75 FT	75 FT
Number of supported smart devices	20	100*	128
Can be controlled locally (without internet)		•	•
Requires multiple access points to extend the range	•		
Secure connection	•	•	•
Can be used with voice-controlled assistant	•		•

**The actual maximum number of Bluetooth devices supported in a mesh network is much higher (32 767) but achieving these numbers would require professional network installations and mesh network segmentation.*

You can use a free network scanner tool to determine the limited range of your router. Wireless strength is represented as dBm (decibel-milliwatts) and a good Wi-Fi signal will usually range between -30 and -65 dBm. Anything lower than -65 dBm will most likely experience issues.

The technology you choose doesn't have to be all the same. You can easily combine Bluetooth Mesh devices with Wi-Fi devices thanks to the Dals Connect App. It all depends on the application. If you wish to have smart recessed devices for your exterior soffits, you would opt for Dals Connect Pro products to gain maximum range and inter-connectivity, and could combine them with Wi-Fi products for your living room. The choice is up to you!

Pro hub

By connecting to the hub you enable communication with the cloud and the Dals Connect app, allowing users to easily view and control up to 128 smart devices for each hub that use the Bluetooth protocol. Supports Wi-Fi and BLE Mesh: You can control it remotely through Wi-Fi or locally through BLE, ensuring gateway availability even if there is no network.

Model	Size	Wi-Fi	Bluetooth	Number of supported devices	Alexa & Google Assistant compatible	Voltage
