LIGHTING

DESIGN

GUIDE

2024

15
YEARS

Our mission is to offer the highest level of service and quality through an innovative, functional and complete product line.

DALS Lighting is a manufacturer of designer lighting products focusing on smart, innovative and emerging technologies. Our lighting systems are displayed and stocked at several lighting showrooms and retailers, electrical distributors and e-commerce platforms.

Our products are also sold on projects across North America through an extensive network of agents who work with architects, engineers, contractors and distributors. We strive for excellent service, superior lead times, environmental innovation and product quality.

DALS headquarters

Our milestones

2008

DALS Lighting Inc. was founded and quickly grew to become a leader in accent lighting by launching an innovative LED product line.

2009 - 2014

DALS continues its steady growth by shifting all of its product lines to LED light sources while continuing to focus on best-in-class service.

2015

Following its rapid growth with LED products across North America, DALs launched its LED Design Guide, which focused exclusively on LED technology and included several new innovative items. DALs also opened its LED lighting showroom at the Dallas Market Center in Dallas, Texas.

2016

DALS moved into its new headquarters in Blainville, Quebec, Canada. DALs also expanded its U.S. operations in Coral Springs, Florida.

2017-2019

DALS launched its smart home ecosystem, which includes a range of connected products that are easy to use with the DALs mobile app. The launch of this category has generated a lot of excitement in the industry and we've dedicated a team to accelerate the continued development and optimization in this division.

2020-2022

In 2020, DALs opened its new atrium showroom at the Dallas Market Center and accelerated its product launch cadence. We launched the DALs Connect and DALs Connect PRO smart platforms as well as new product categories such as landscape lighting, which resulted in significant growth.

2023

In 2023, DALs achieved significant expansion by doubling the size of its headquarters and main warehouse, reinforcing its commitment to operational excellence. Simultaneously, the company forged a strategic financial partnership, positioning itself for accelerated growth in the upcoming phases. This expansion and financial collaboration underscore DALs's dedication to enhancing its infrastructure and preparing for a dynamic future.

2024

In 2024, DALs proudly unveils its largest product launch, emphasizing enhanced features and elevated product content. We are expanding into decorative categories and offering additional options for the commercial market, reflecting our dedication to meeting diverse customer needs and continuously improving our offerings.

NEW

New product

This symbol depicts a new product launching this year. Look for specifications for these products in this catalog.

UPGRADE

Product upgrade

When you see this symbol, it indicates that an existing product has undergone extensive enhancements.

Low-glare

The recessed positioning of the LED module in this series of down-lights significantly reduces glare.

Change colors

RGB+CCT color-changing light – choose your favorite color to create different atmospheres or use it for general illumination with a range from warm to cool white.

Air tight

Airtight fixtures help prevent air conditioning or heating from leaking out of the home through holes in the ceiling.

JA8

JA8/Title 24

This certification ensures that the lighting control system is designed, installed, and programmed correctly to comply with the JA8/Title 24 Lighting building code of California.

Multi-voltage

This symbol indicates that a product family offers multi-voltage drivers (120/277/347) that can be dimmed using 0-10V dimming systems.

Fire rated

Fire-rated recessed lights feature fire-resistant housings and seals to prevent fire from spreading through ceiling or wall openings, ensuring safety and compliance with building codes.

CCT switch

These types of lights provide you with the ability to change the color temperature. Within one fixture, you have a range of color temperatures that go from warm white to cool white.

IC rated

"IC" stands for Insulation Contact. The IC rating is essentially a measure used to determine whether a recessed downlight is suitable to come into contact with your home's insulation or not.

Smart home

This symbol indicates that the light fixture can be controlled from the DALI Connect app. You can remotely adjust the lighting in your home from anywhere, enjoy greater control over lighting effects such as dimming and color, and establish automated lighting schedules around your lifestyle.

Dry location

Dry-rated lights don't protect against condensation and should not come into contact with water. However, these fixtures can withstand brief exposure to moisture with proper ventilation.

Damp rated

Damp-rated lights are used in places that have some contact with moisture but not in areas with constant or direct exposure to water. For example, you can use damp-location rated fixtures to illuminate the area directly outside your shower.

Wet rated

Wet-rated lighting fixtures are used in places with direct exposure to water but cannot be submerged. Fixtures rated for wet locations use waterproof seals to protect their internal components from moisture.

ADA

ADA compliant

The ADA sets regulations that define limits and standards contractors must meet and comply with when installing light fixtures in public buildings. To be considered ADA compliant, the fixture cannot extend more than 4 inches into the hallway, walkway, or corridor to protect people with disabilities from bumping into them and harming themselves.

Bluetooth compatible

This smart light, while Bluetooth-compatible, can be seamlessly integrated into your DALI Connect ecosystem.

Motion sensor

This symbol indicates that a light fixture incorporates responsive technology, detecting movement in its proximity and triggering the illumination for enhanced efficiency and convenience.

Proper Sizing, Spacing and Downlighting Techniques

The components

Our recessed kits include two main components: the driver and the fixture.

The driver (A)

is what is recessed into the ceiling and consists of the electrical parts that bring power to the light.

The fixture (B & C)

is what's visible to people in the room and gives the light its aesthetic.

Fixtures and drivers are sized to correlate with one another and are sold together with all of our recessed lights.

Panels. Spotlights. Downlights. Whatever you call recessed lights, they're some of the most versatile lighting options out there. The most common use of recessed lighting, and what we'll focus on here, is recessed downlighting from the ceiling.

Installation type

What fixture you choose starts with knowing whether it will be used in a new construction, a remodel or as a retrofit.

D

New construction

Locations with visible ceiling joists and without drywall. Lights can be used with our rough-in plates (**D**) to help in the installation process.

Remodels

When the joists are not exposed or if you want to upgrade your current system to LED.

E

Retrofit

When an existing bulb is removed from the original housing, and replaced with an LED trim (**E**).

**GOOD
TO KNOW!**

Most of Dals' recessed fixtures are designed for new construction and remodels. These fixtures are installed through a small opening in the ceiling and held in place with clips.

**GOOD
TO KNOW!**

A rough-in plate is designed for new construction or renovations where the ceiling framing is exposed. It allows for proper placement of your recessed light and is made from sturdy galvanized steel.

How many downlights do I need?

A simple method for estimating the number of downlights required is as follows:

Recessed downlights are generally positioned 2 to 3 feet away from walls with a space of 3 to 4 feet between each light.

Dividing the ceiling height by two is a way of gauging how much space to leave between each downlight.

Thus, if your ceiling is 8 foot high, place your lights 4 feet apart.

In Canada, 4" recessed lights are the most popular, in the U.S., 6" are most commonly used.

Horus

A versatile lighting solution with a flexible design for precise illumination, its gimbal mechanism allows users to easily adjust the light angle, making it ideal for residential or commercial settings. The compact 3-inch size is suitable for tight spaces, and the spotlight's focused beam makes it perfect for accent lighting or task-oriented applications.

Multi-voltage ⚡

This product family offers multi-voltage drivers (120/277/347) that are dimmable using 0-10V dimming systems. Please note that longer lead times may apply for this option. Kindly reach out to your DALI representative for additional information and to confirm availability.

Note

Other color temperatures, finishes, and voltage options are available but may require minimum order quantities (MOQs) and longer lead times. Please contact your DALI representative for more information.

Revolve square

Our Recessed family has grown with a new range of adjustable downlights. The effortless design and high functionality of these fixtures are sure to make a welcome addition in any room.

*Models GBR35-DW , GBR04-DW, GBR06-DW only

Model	Size	Watts	Delivered lumens	CRI	Color °T	Standard voltage	Multi-voltage ⚡
GBR35SQ-CC	3.5"	12 W	860 lm	90	2700, 3000, 3500, 4000, 5000 K	120V, Triac dimming	MV: 120 / 277 / 347V, 0-10V dimming

Specifications

Every fixture includes a junction box with an integrated driver
 Over 50,000 hours service life
 Switch-selectable CCT: 2700 K/ 3000 K/3500 K/4000 K/5000 K
 40° beam angle
 30° tilting, 360° rotation
 Cast aluminum construction
 Suitable for wet locations

GBR35-CC-DUO 7-1/8" x 3-1/2" 

Facet

This versatile modern thin-trim 2, 4 and 6-inch gimbal with multi-directional adjustable swivel produces a bright glow with minimal glare as a result of its regressed light source. Ideal for general lighting or for areas requiring a directional light to showcase unique elements or to create dramatic wall-wash effects.

Multi-voltage ⚡

This product family offers multi-voltage drivers (120/277/347) that are dimmable using 0-10V dimming systems. Please note that longer lead times may apply for this option. Kindly reach out to your DALI representative for additional information and to confirm availability.

Note

Other color temperatures, finishes, and voltage options are available but may require minimum order quantities (MOQs) and longer lead times. Please contact your DALI representative for more information.

Etch

The Etch range of circular recessed downlights, characterized by a deep-set LED position, provides a functional solution to general lighting without the uncomfortable glare.

ACCESSORIES

Proper Sizing, Spacing and Lighting Techniques

As its name suggests, under cabinet lighting refers to lights that are installed under a cabinet, resulting in illumination of the area immediately below a section of cabinets. It is most commonly used in kitchen areas, where additional lighting is useful for food preparation.

Types of under cabinet lighting

Puck lights

Pucks are the most versatile products as they can be installed in any application. Most of our pucks can be either surface-mounted or recessed into cabinetry, ensuring a flush surface appearance. Our pucks are designed to provide smooth and uniform light output.

Linears

Linears are ideal for efficient and uniform solutions. All our linears are designed for surface mounting, and many of them can pivot to focus on features such as the backsplash. Most linears come in various sizes, allowing them to be combined to cover the length of most surfaces.

Tape lights

Tape lights are flexible rolls of LEDs with adhesive backs, suitable for virtually any application, extending beyond under-cabinet lighting. Tape lights have a super low profile and are easy to install.

How many do I need?

If you are installing pucks, we recommend spacing them approximately 24 inches apart. For linears, you can either seamlessly install them from end to end or leave a gap equivalent to the size of the product.

Power source

Low-voltage (12V)

Low-voltage systems consist of two components: the light fixture and the driver. Typically, a single driver is employed to power multiple products. The advantages of low-voltage systems include the ability to create sleeker light fixtures with fewer required components. Additionally, the wiring from the driver to the fixtures is low-voltage, resulting in thinner and less restrictive wiring.

Direct wire (120V)

120V direct means that no other components are required to power the product. Either the LED's are 120V direct or a driver is integrated in each product. The advantage of a 120V product is the ease of installation.

Dimmer/driver switch (12V)

Replace your 12V driver with an integrated driver/dimmer to control the brightness of your low-voltage lights. Simply connect this unit to your 120V input current to regulate your low-voltage lighting.

Choosing the right driver

We offer a wide range of plug-in **(A)**, direct wire **(B)**, and dimmer/driver switches **(C)**. To select the correct driver, simply add up the wattage from all your lights and choose a driver with a higher wattage that suits your specific needs.

Connections

Direct wire

Direct wire systems are typically installed by electrical contractors, it means that the power feed is connected directly inside the product or driver, without any plugs therefore no exposed wires. Direct wire installations must be enclosed in a connection box with a minimal volume for a safe connection. All of our direct wire products have the connection box built in to them with convenient knock-outs to discretely pass the wiring.

Plug-in

Plug-in options are really easy to install as they plug directly into an electrical outlet.

Dimmer/driver switch

Dimmer/driver switch systems, two-in-one integrated units often installed by qualified electricians, seamlessly replace your standard wall switch and transformer simultaneously. This involves connecting the power feed directly inside the switch, eliminating the need for plugs and exposed wires.

For optimal dimming try to use up at least 50% of the driver's capacity. For example, if all products come up to 10 watts, you would be much better off with a 12W driver than a 24W driver.

COB-tape

This tape will not only emit a wonderful warm glow but also provide you with continuous, seamless light. You can cut it every inch and reattach it with the supplied connectors. No more waste.

Specifications

Constant voltage mode power supply

AC-dimming supply
(with TRIAC or ELV dimmer)

Protection: short circuit / Over voltage

Integrated junction box for
hard-wire installation

Fully isolated metal case -

Cooling by air convection

ETL certification

Optimal dimming when used at 50%
or more of total load

Input voltage: 100VAC-230VAC, 50/60Hz

Output voltage: 12V DC

Load Range: 50% to 100%

Operating temperature: -30°C to 45°C

5-year warranty

Slide

Replace your 12V driver with this 12V dimmer switch with an integrated driver to control the brightness of your low voltage lights. Connect this unit to your 120V input current, and all your lights will dim to a nice, soft glow.

Model	Size	Dimmer	Switch	Minimum load	Maximum load	Input voltage	Output voltage
DD1260	4-1/4"	✓	✓	5 W	60 W	120 VAC	12 VDC

Specifications

LED driver and dimmer in one unit

Indoor use only

Input: 120 VAC ~ 1.0 A, 60 Hz

Dimming range: 100% - 10%

Dimming type: TRIAC edge cut

Fits in a standard electrical box

Single pole

Works with all dimmable 12V lights

5-year warranty

Finish

☐ **WH** White

Note

Does not work with Dals smart lights.

Requires a neutral wire. Works in a single-pole setup only.

LNACC-L16FT
 16-foot lens for Boulevard series pendants and recessed linears

Multi-voltage ⚡

This product family offers multi-voltage drivers (120/277/347) that are dimmable using 0-10V dimming systems. Please note that longer lead times may apply for this option. Kindly reach out to your DALI representative for additional information and to confirm availability.

Note

Other color temperatures, finishes, and voltage options are available but may require minimum order quantities (MOQs) and longer lead times. Please contact your DALI representative for more information.

LNPD48-CC

Pinpoint linear

Providing a contemporary and functional style to any space, the MSL pendant and its glossy piano-black reflector is the ideal choice for dining rooms, conference rooms as well as playrooms.

LEDWALL-E	13-3/4"	12 W	870 lm	90	3000 K	120 V

Specifications

Made of extruded aluminum
 Fully sealed light engine
 Over 50,000 hours of service life
 Unique up and down lighting output
 Low profile design
 Warm white light output
 Superior color consistency
 Integrated dimmable driver
 ADA compliant

Suitable for wet locations
 Refer to website for dimmer compatibility
 Ideal operating temperature:
 -20° to 40° C
 5-year warranty

Finish

● **BK** Black

Note

Other color temperatures, finishes, and voltage options are available but may require minimum order quantities (MOQs) and longer lead times. Please contact your DALI representative for more information.

LEDWALL-E

Geneva

Imagine being able to manually control the amount of light spread coming from both the top and bottom of your lighting fixture. This is now possible with our LED wall mount.

ACCESSORIES

A low-voltage landscape lighting plan

The three main components

A. Low-voltage transformer

- The power supply for your system
- Usually mounted near or on the house that is plugged into a regular outdoor-rated GFCI electrical outlet.

** Avoid mounting the transformer in shady areas, this could interfere with the "dusk-to-dawn" photoelectric cell.*

** Should be installed at least 36" (3 feet) off the ground.*

B. Landscape lighting fixtures

- Integrated LED spot lights, path lights, and bollards.
- Powered by the transformer

** When you choose lights, add up the total wattage they consume. You'll need this number for choosing other parts of your landscape lighting system.*

C. Landscape lighting wire

- The wire connecting the transformer to the light fixtures.
- Rated according to the size of its conductor (gauge)

** A 12-gauge wire is larger and can handle more wattage than a 14-gauge wire.*

** Selecting the right wire size is important and will prevent any issues down the road.*

Transformers

60W

300W

Path lights

These fixtures aren't limited to paths. When mounted in gardens, they provide a gentle glow that lights a small surrounding area of plants, rock, or mulch.

Spot lights

Use spotlights to make trees, plants, shrubbery, or a home's architectural features stand out.

Bollards

Use these lights to enhance the look of your yard while making walkways obvious at night.

Landscape wire

Versatile 12, 14, and 16 gauge low-voltage wire for spot lights, path lights, and bollards.

Mix it up! Different types of fixtures can be connected together.

The four steps for an LED landscape installation

1. Map out a plan

- Start your layout by creating a sketch of your property.
- Be accurate with dimensions to help estimate distances for wire runs.
- Try sketching and measuring as you walk around the property marking where each fixture will be placed.

2. Set fixture locations

- Mark their locations with small flags on your property and indicate their placement on your sketch.
- Measure distances between fixtures and write them down on your layout.

3. Choose a power supply

- To figure out which power supply is best, consider two things: the total wattage of the lights that you're purchasing and if you anticipate adding lights in the future.
- When you add up the wattage of all lights, you'll have a good idea of how powerful your transformer needs to be. However, the total wattage of your lights should be 20 percent less than the transformer's rated wattage.
- Once you've selected the right transformer, the best placement is usually next to the house in a hidden location, as close as possible to the fixtures.

4. Wiring

Now you need to provide power to the fixtures. The length of runs helps determine what gauge of wire to buy. As a general rule, try to keep the runs under 50 feet with a maximum of 8 fixtures per run. Lower loads per run means lower voltage drop.

What is Voltage Drop?

Voltage decreases as it moves through a run of wire and a series of lights. This means that, because each light is receiving a little less than the one before it, lights can appear dimmer toward the end of a series. A small loss is OK, but anything more than a 1.5-volt drop should be corrected.

Checklist

Before you get ready to install your lights, make sure you have all the tools and accessories required. Below is a basic list of what you might need.

- Landscape lights
- Transformer
- Wire
- Waterproof junction box to protect connections
- Flat-blade shovel or edger
- Wire cutters
- Wire strippers
- Voltage meter
- Tape measure
- Hardware to install transformer on house or post

Check your LED fixtures' voltage requirements. This plan is for use as a guide only to help you begin your lighting project. We strongly recommend checking the actual voltage at each fixture with a volt-meter before burying and finalizing your project.

Minimize voltage drop, and wasting wire, by using one of the wiring methods below:

Daisy Chain

Connects all fixtures in a linear fashion, where the first fixture connects to the transformer.

Tip:

Use the Daisy Chain method when fixtures are not grouped and can be easily connected in a chain.

T-Method

Similar to the Daisy Chain method, except the transformer connects to the middle of the chain.

Tip:

Use the T-Method when you built a Daisy Chain in the field and want to connect it to the transformer from the middle of the chain – at whatever point saves you the most wire.

Hub Method

All fixtures run through a hub junction and are connected to a single line from the transformer, ensuring each fixture receives an equal share of voltage.

Tip:

Use the Hub Method when fixtures are grouped in a small area such as in a garden bed.

How to create

A Dals Connect PRO Smart Landscape Plan

The main components

A. Low-voltage transformer

- The power supply for your system
- Usually mounted near or on the house that is plugged into a regular outdoor-rated GFCI electrical outlet.

** Avoid mounting the transformer in an area with poor Wi-Fi reception.*

** Should be installed at least 36" (3 feet) off the ground.*

B. Landscape lighting fixtures

- Dals Connect PRO integrated LED spot lights, path lights, flood light, step light, stick light or ground light.

- Powered by the transformer

** When you choose lights, add up the total wattage they consume. You'll need this number for choosing the right transformer for your system.*

All Dals Connect PRO Landscape products come with a 6-foot extension wire and a T-connector for easy plug-and-play to facilitate installation.

Mix it up! Different types of Dals Connect PRO fixtures can be paired together with your smart landscape

Transformers

These 24V transformers come in three power capacities, 60W, 200W and 300W. An integrated PRO hub is also included.

Plug-in Transformer & Dals Connect PRO Hub

Use the 36W DC adapter paired with a PRO Hub for smaller landscape projects

Plug-in Transformer

Use the 36W DC adapter paired without a hub for smaller landscape projects with local controls.

Path lights

These fixtures aren't limited to paths. When mounted in gardens, they provide a gentle glow that lights a small surrounding area of plants, rock, or mulch.

Spot lights

Use spotlights to make trees, plants, shrubbery, or a home's architectural features stand out.

Stick lights

Use these lights to enhance the look of your yard while making walkways obvious at night.

Step Light

These fixtures can be surface mounted to almost anything to provide a soft glow to anything under it.

Rock Light

Bring magic to your landscape with these glowing rocks.

Flood Light

Use these lights to create wall washes or illuminate big portions of your yard

Ground Light

Use ground lights to illuminate trees and plants from below or decorate the floor of your deck.

The science behind your SMART landscape

1. Map out a plan

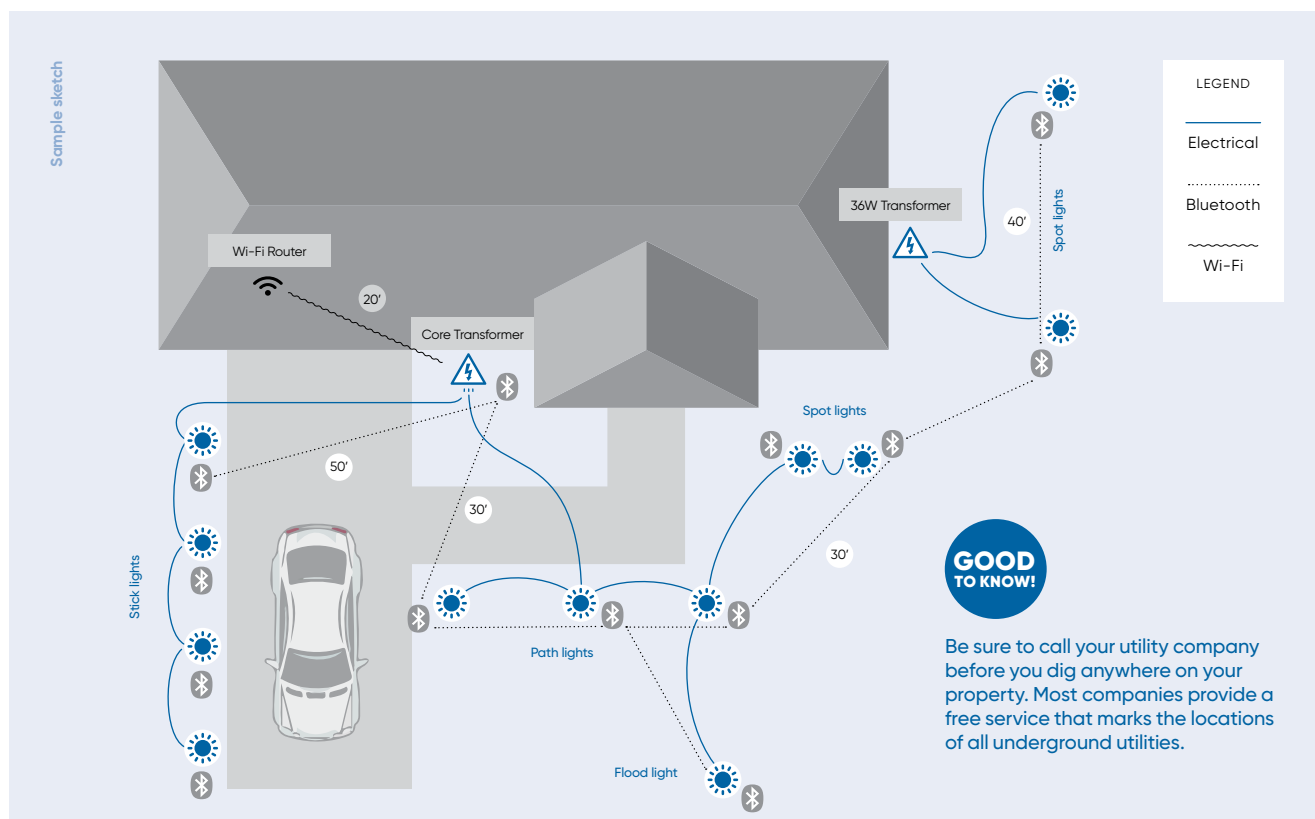

- Start your layout by creating a sketch of your property.
- Be accurate with dimensions to help estimate distances for wire runs.
- Try sketching and measuring as you walk around the property marking where each fixture will be placed.
- You can also mark the spots on your land where the Wi-Fi signal drops on your phone, this will help determine the preferred spot for your transformer placement.

2. Set fixture locations

- Mark their locations with small flags on your property and indicate their placement on your sketch.
- Measure distances between fixtures and write them down on your layout.
- Note how far away your Wi-Fi signal can reach.
- Check that all smart landscape products are within 30–50 feet of each other for maximum connectivity.
- We recommend pairing your smart landscape lights closer to the house first, and then move them to their desired location. An Internet connection is required for the first pairing.

3. Choose a power supply

- To figure out which power supply is best, consider two things: the total wattage of the lights that you're purchasing and if you anticipate adding lights in the future.
- When you add up the wattage of all lights, you'll have a good idea of how powerful your transformer needs to be. The total wattage cannot exceed the capacity of the transformer.
- Once you've selected the right transformer, the best placement is usually next to the house in a hidden location, as close as possible to the first fixture and to your Wi-Fi.

4. Wiring

To connect Dals Connect PRO smart landscape products, all you need is the included power extensions and T-connectors. Every connector has only 1 way to be plugged in, so making a mistake should be easy to avoid.

What is Voltage Drop?

Voltage decreases as it moves through a run of wire and a series of lights. This means that, because each light is receiving a little less than the one before it, lights can appear dimmer toward the end of a series. A small loss is OK, but anything more than a 2.5-volt drop should be corrected.

Checklist

Before you get ready to install your lights, make sure you have all the tools and accessories required. Below is a basic list of what you might need.

- Landscape lights
- Transformer
- Wire
- Tape measure
- Hardware to install transformer on house or post
- Your Wi-Fi password

Check your LED fixtures' wattage requirements. This plan is for use as a guide only to help you begin your lighting project. We strongly recommend planning your total load first and make sure you don't go over 100% load.

Easily wire your smart landscape with our plug & play wiring system.

GOOD TO KNOW!

Each fixture includes a 6 in. input lead, a T-connector, and a 6-foot extension cord. Everything you need to install fixtures 6 feet apart.

Interconnect

Use the T-connector to start a new run or connect two products together.

Extend

Use our 6 or 20-foot extension cables and connect them back-to-back to create longer runs.

Simple

Using our plug-and-play connectors means no extra hardware is required.

Glam

This rechargeable table lamp, featuring three color temperature settings and stepless dimming functionality, offers versatile lighting with a long-lasting 10-hour battery life.

Model	Size	Watts	Delivered lumens	CRI	Color °T	Voltage

Flux

Add visual interest to your garden with the Flux outdoor path light. A 360° light spread and cast aluminum construction with a powder-coated finish fits best along pathways, garden beds, and walkways.

Model	Size	Watts	Delivered lumens	CRI	Color °T	Voltage
LPP20-CC	20"	8 W	360 lm	80	2200, 2700, 3000, 3500, 4000 K	12 VAC

Specifications

Over 50,000 hours of service life
 12VAC input
 Ground stake included
 93° beam angle
 Frosted lens
 Can be mounted to wood or concrete
 (screws not included)
 Cast aluminum construction
 Switch-selectable CCT: 2200 K/2700 K/
 3000 K/3500 K/4000 K
 Suitable for wet locations
 5-year warranty

Note

Low-voltage transformer required.
 Sold separately.

Other color temperatures and finishes
 options are available but may require
 minimum order quantities (MOQs) and
 longer lead times. Please contact your
 DALS representative for more information.

KAYU / P. 334

Core

The heart of your connected landscape system. By adding the Core, you unleash the full potential of smart lighting.

Model**DCP-TR60**

60W low-voltage smart transformer

**DCP-TR200**

200W low-voltage smart transformer

**DCP-TR300**

300W low-voltage smart transformer

**Specifications**

Constant voltage mode power supply
Protection: short circuit / Over voltage
Input voltage: 120VAC 60Hz
Output voltage: 24V DC
Output Power: 60W, 200W, and 300W
Maximum recommended load: 80%
Operating temperature: -30°C to 45°C
Control with the Dals Connect app
Integrated Hub
Number of supported smart devices per hub: 128
Can be controlled locally (without internet)
Works with Dals Connect PRO devices
Secure connection
Can be used with a voice-controlled assistant
Supports Wi-Fi and BLE Mesh protocols
5-year warranty

One app – one smart ecosystem with technology options

DALS launched its first smart home products in 2017 and has sold over 350,000 devices as of December 2023, showcasing our developed application expertise.

In 2019, the introduction of our DALS Connect platform quickly established its leadership with its Wi-Fi direct product ecosystem.

In 2022, DALS expanded its offerings with the launch of the DALS Connect PRO product assortment. This line utilizes Bluetooth mesh technology,

enabling a higher number of devices on a network and introducing several other advanced features.

Both DALS Connect and DALS Connect PRO products seamlessly work together and can easily coexist on the same application.

Additionally, we are excited to announce the launch of many more smart home products this year, including a variety of new landscape products.

There are many benefits to smart lighting

Experience

White color temperature and a wide array of fun colors are easily changeable, allowing you a multitude of lighting options for comfort.

Save

Save on energy and increase your home's security by using schedules or remotely turning on/off the lights when no one is home.

Control

Easily control your lighting with smart switches, your phone, or a voice assistant for even more convenience.

Create

With the Dals Connect app, you can program your own lighting scenes for specific conditions and tasks, such as watching movies, daytime or nighttime reading, parties, and much more. Within a scene, you can change the brightness, color temperature, and even use different hues.

What are the main differences between DALS Connect and DALS Connect PRO?

dals || CONNECT

Quick start – direct features

DALS Connect products use Wi-Fi wireless technology which is used widely to connect computers, tablets, smartphones, smart devices, and others to the internet. Wi-Fi is shared through a router to all Wi-Fi enabled devices. This technology allows for a lot of range and a lot of devices, although there are some limitations as well. Wi-Fi has a relatively high absorption rate and works best for line-of-sight uses. A residential wireless access point usually has a range of about 30 feet and a maximum of 20 devices, depending on the type of wireless access point.

dals || CONNECT PRO

Higher number of devices – independent network

DALS Connect PRO uses Bluetooth-mesh technology. It works on the principle that each Bluetooth device on the mesh network can relay commands to another device, through the connection from the previous device. Bluetooth-mesh networking is a standard based on Bluetooth Low Energy that allows for many-to-many communication over Bluetooth radio. You can use your smart phone or tablet to control large groups of products even without an internet connection.

Dals Connect Pro hub

You can also add the Dals Connect Pro hub, to connect up to 128 DALS Connect PRO products to the cloud as a single internet connection (as opposed to DALS Connect products where each product has its individual connection). You can also use multiple hubs for projects with more than 128 devices, with each hub acting as an internet connection as well. Cloud connection allows you to use your products with voice command platforms (such as Google Home and Amazon Alexa) as well as allowing for remote control.

Not all Wi-Fi routers are created equal. A 30\$ router will not perform the same or support the same number of devices as a 350\$ router. The number of antennas will greatly increase your Wi-Fi range.

Most smart devices only operate on the 2.4 GHz spectrum, whereas most routers nowadays share the same band for 5 GHz and 2.4 GHz. If you experience issues with disconnecting devices or trouble adding new devices, try separating your 5 GHz and 2.4 GHz band on your router. Your internet service provider can help you set this up.

Which one is best for me?

Thanks to the Dals Connect Application, you don't have to use multiple apps to control all of your smart devices, even if you decide to mix and match communication technologies.

The Dals Connect App can support Bluetooth-mesh devices mixed with Wi-Fi devices, and you can add cloud connectivity to your Bluetooth-mesh devices using the Dals Connect Pro hub. All of these will work together, but which one is right for you?

Let's find out.

	DALS Connect	DALS Connect PRO	DALS Connect PRO + Hub
Uses the DALS Connect App	•	•	•
Can be controlled from multiple devices at once	•		•
Range of operation from the controller (Wi-Fi router or another Bluetooth-mesh device)	30 FT	75 FT	75 FT
Number of supported smart devices	20	100*	128
Can be controlled locally (without internet)		•	•
Requires multiple access points to extend the range	•		
Secure connection	•	•	•
Can be used with voice-controlled assistant	•		•

**The actual maximum number of Bluetooth devices supported in a mesh network is much higher (32 767) but achieving these numbers would require professional network installations and mesh network segmentation.*

You can use a free network scanner tool to determine the limited range of your router. Wireless strength is represented as dBm (decibel-milliwatts) and a good Wi-Fi signal will usually range between -30 and -65 dBm. Anything lower than -65 dBm will most likely experience issues.

The technology you choose doesn't have to be all the same. You can easily combine Bluetooth Mesh devices with Wi-Fi devices thanks to the Dals Connect App. It all depends on the application. If you wish to have smart recessed devices for your exterior soffits, you would opt for Dals Connect Pro products to gain maximum range and inter-connectivity, and could combine them with Wi-Fi products for your living room. The choice is up to you!

Pro hub

By connecting to the hub you enable communication with the cloud and the Dals Connect app, allowing users to easily view and control up to 128 smart devices for each hub that use the Bluetooth protocol. Supports Wi-Fi and BLE Mesh: You can control it remotely through Wi-Fi or locally through BLE, ensuring gateway availability even if there is no network.

Model	Size	Wi-Fi	Bluetooth	Number of supported devices	Alexa & Google Assistant compatible	Voltage
DCP-HUB	4"	✓	✓	128*	✓	120 V
